RASVANI

INDIA, SERVED BY REGION.

ULTIMATE WEBSITE BUILD PROMPT

A complete, phased blueprint for a premium Indian regional-food discovery, storytelling and commerce platform.

Design direction: heritage-meets-modern, warm cream, deep maroon, terracotta, forest green and harvest gold. The supplied reference is a visual direction, not a pixel-perfect template.

PROJECT DECISION	CONFIRMED DIRECTION
Brand	Rasvani — always spell it Rasvani; do not use RASO.
Tagline	India, Served by Region.
Business model	B2C shopping + B2B retailers, wholesale, distributors + producer partnerships.
Launch focus	Bihar first; architecture for all 28 states and 8 Union Territories (36 total).
Backend	Supabase is the approved database/backend foundation.

PROJECT DECISION	CONFIRMED DIRECTION
Build method	Implement in phases; test and approve each phase before starting the next.

MASTER HANDOFF • DESIGN • DEVELOPMENT • CONTENT • PRODUCER OPERATIONS • QUALITY • LAUNCH

How to use this master prompt

Treat this document as the single working specification for the Rasvani website. It consolidates the existing website requirements and adds the newly requested producer-inspection, better-choice food, image-authenticity and experience requirements. The implementation team must preserve every requirement and record any approved change.

- **Build phase by phase.** Do not ask an AI coding agent or development team to create the entire platform in one uncontrolled pass.
- At the beginning of each phase, inspect the current repository, identify what already works, and avoid replacing working features without a reason.
- At the end of each phase, run the application, test the acceptance checklist, fix defects and obtain approval before moving forward.
- Use realistic sample data only in development. Clearly label demo content and never publish it as real product, producer, review, certification or regional fact.
- Launch Bihar first with verified content and products. Prepare the data architecture for all 36 States and UTs, but do not publish empty or unverified pages.
- Do not invent founder history, business credentials, producer identities, district origins, food claims, product ingredients, customer reviews, certifications, stock, prices or delivery promises.
- Do not create duplicate sections, dead buttons, misleading badges, fake ratings or decorative controls that do nothing.

Critical trust rule: a product or producer must not be presented as verified until the required checks are completed and recorded. A submitted producer application is not an approval.

1. Project vision, purpose and audiences

Positioning: Rasvani is a premium, modern Indian regional-food discovery and commerce platform. It helps people discover authentic traditional foods by state, district, food name, occasion and preference; understand the food and its makers; and purchase products through a reliable shopping experience.

Problem being solved: people living away from their hometowns struggle to find familiar regional foods; local makers often lack organised market access; and customers may not know which foods are associated with a place or how to identify a trustworthy product.

Mission: connect regional producers, traditional food makers and customers through thoughtful discovery, transparent product information, responsible sourcing, reliable commerce and regional storytelling.

Primary audiences

- Individual customers seeking hometown favourites, sweets, snacks, festival foods and new discoveries.
- People living away from their home state, district or community; families, gift buyers and festival shoppers.
- Retailers, supermarkets, wholesalers, distributors, corporate buyers and hospitality businesses.
- Traditional food producers, artisan makers, local businesses and regional manufacturers.
- Readers interested in Indian regional cuisine, recipes, ingredients and food heritage.

Core customer journeys

- Discover a region: Home → Explore India → State → District → Food collection → Product → Cart → Checkout.
- Find a product: Search → Results → Filters → Product detail → Delivery check → Cart → Checkout.
- Buy a regional collection: Select region → Curated products → Collection/box → Checkout.
- Retail enquiry: For Retailers → Partnership information → Enquiry → Confirmation and follow-up.
- Producer application: Become a Producer Partner → Eligibility → Application → Review → Inspection/testing → Decision → Onboarding.
- Learn and shop: Food Stories → Article/video → Related region or product → Product detail.

2. Visual identity and UI design system

Use the uploaded RASO reference image as inspiration for layout mood and colour treatment only. The live brand must say Rasvani. The result should feel like a premium Indian food journal combined with a polished commerce experience—not a generic grocery app.

2.1 Colour palette

TOKEN	COLOUR	USE
Deep heritage maroon	#5A1F24	Primary buttons, strong headings, footer, premium accents.
Warm cream	#F6EBDD	Main page background and warm content surfaces.
Terracotta	#A64F2B	Primary brand accent, links, highlights.
Forest green	#263D32	Trust, sourcing, nature and secondary navigation.
Harvest gold	#D6A44D	Small accents, icons, dividers and highlights.
Ink	#2D2926	Body text.
Paper white	#FFFCF6	Cards and product surfaces.

2.2 Typography and components

- Headings: Playfair Display or Cormorant Garamond. Body and UI: Manrope or Inter. Choose fonts with strong Indic-script coverage and reliable fallbacks.
- Use softly rounded cards, restrained shadows, fine borders, generous whitespace and editorial image layouts.
- Use icons consistently for search, cart, location, vegetarian/dietary information, festivals, producer and delivery.
- Create reusable buttons, badges, cards, filters, form fields, accordions, tabs, alerts, skeletons, empty states and modal patterns.
- Use region-specific art motifs (Madhubani, Warli, Kalamkari or local craft references) only when relevant to the actual region. Never use one motif indiscriminately across India.
- Keep WCAG AA contrast. Check gold on cream and maroon on terracotta combinations; do not rely on colour alone to communicate status.
- Prepare primary, compact, monochrome and favicon logo versions. Do not distort the approved logo.

2.3 Visual hierarchy

- Homepage hero: warm, cinematic, food-led image with clear headline, short supporting copy and two visible calls to action.
- State and district pages: strong regional hero, clear origin context, editorial intro, then product discovery.
- Product cards: consistent image ratio, product name, verified origin, pack size, price, stock state and clear action.
- Product details: image gallery balanced with purchase controls, origin and ingredient transparency.
- Use seasonal/festival campaign banners only when the collection, products, price and fulfilment are actually ready.

2.4 Image rules

- **Actual products:** use real photographs of the exact food and pack being sold. Product images must never be replaced by AI food images.
- **Producers:** use real, consented portraits and production photographs. Never imply a stock or AI image depicts a named producer, factory or village.
- **Regional food:** use authentic, licensed images with verified regional association. Do not assign a food to a district without evidence.
- **AI visuals:** may be used for decorative backgrounds, conceptual moodboards, abstract motifs or clearly illustrative campaign artwork. Never use AI imagery as evidence of a real product, producer, origin, certification or inspection.

- Do not use clipart instead of food photography. Do not crop off the food or packaging unintentionally. Preserve readable labels where shown.
- Obtain usage rights and consent for photographs, recipes, interviews and videos. Add captions, attribution and descriptive alt text.

IMAGE PLACEMENT	WORKING SOURCE SIZE
Homepage hero	1920 × 1080 or larger; prepare a separate mobile crop.
Product image	1200 × 1200.
State/district card	900 × 1100.
Editorial hero	1600 × 900.
Producer portrait	1200 × 1500.
Mobile banner	900 × 1200.

Use AVIF/WebP where supported, responsive sizes and fallbacks, lazy-load below-the-fold images and reserve image dimensions to prevent layout shifts. Dimensions are working targets, not rigid crop rules.

3. Website sitemap and navigation

AREA	PAGES / CAPABILITIES
Core	Home, About Rasvani, Our Story, Contact, Search.
Shopping	Shop All, categories, collections, bestsellers, new arrivals, product detail.
Regional discovery	Explore India, state pages, district pages, regional collections.
Editorial	Food Stories, recipes, food heritage, forgotten foods, festival stories, producer stories, food videos/vlogs.
Better choices	Rasvani Better Choices, No Added Sugar, Sugar-Free (only eligible verified products), nutrition/ingredient education.
B2B	For Retailers, Wholesale Enquiries, Distributor Enquiries, business account and quotation workflow.
Producer network	Become a Producer Partner, application, verification, inspection, quality testing, onboarding.
Customer account	Register/login, profile, addresses, wishlist, orders, tracking, support and complaint reporting.
Commerce	Cart, checkout, payments, order confirmation, shipping, cancellation/returns/refunds information.
Trust/support	FAQs, food information, quality promise, shipping, returns, privacy, terms, cookies and accessibility.

Primary navigation recommendation: Home · Shop · Explore India · Food Stories · Better Choices · For Retailers · Our Producers. Keep search, account, wishlist, cart and language selection easy to access. On mobile, use a compact menu with persistent search/cart access.

Suggested URL patterns: /, /shop/, /explore-india/, /states/bihar/, /states/bihar/gaya/, /products/traditional-thekua/, /food-stories/, /better-choices/, /for-retailers/, /producer-partners/. Use clean, stable, descriptive URLs and a consistent multilingual URL strategy.

4. Homepage and signature experiences

4.1 Homepage

- Header with Rasvani logo, navigation, search, account, wishlist, cart and language selector.
- Hero headline direction: “Some tastes are not just food. They're home.” Supporting copy: “Discover authentic traditional foods from India's states and districts, brought closer to your doorstep.” CTAs: “Explore India's Flavours” and “Shop All Products”.
- Shop by Region: state cards with relevant imagery, short introductions, accurate product counts and Explore action.
- Interactive India map linked to state/district discovery, plus searchable list alternative.
- Featured regional foods and verified bestsellers showing image, name, origin, pack size, price and real rating only where reviews exist.
- Curated Taste of Home boxes, festival collections and gifting only when products, stock, pricing and fulfilment are ready.
- Rasvani Better Choices teaser, Food Stories, Meet the Makers, producer invitation and retailer partnership sections.
- Trust strip: sourcing approach, product information transparency, customer support and quality process—only claims Rasvani can substantiate.
- Footer with brand, support, shopping/regional links, business enquiries, social/legal links and consent-based newsletter.

4.2 Explore India — signature experience

Core concept: “One India. A Thousand Food Traditions.” Customers must be able to discover foods even when they do not know the food's name.

- Interactive illustrated India map with all 28 states and 8 Union Territories, accurate boundaries and selectable regions.
- Show state/UT names clearly on the map at useful zoom levels where legibility allows. If labels become crowded, use responsive label placement and always provide an equally usable searchable list.
- Hover/focus/selected state treatment; selection opens a state overview with concise introduction and available food preview.
- State pages list districts and regional food collections. District selection opens verified food information, photographs, stories and products.
- Search by state, district, food, product, category and occasion. Support native spellings, transliterations and common variants where practical.
- Mobile map/list alternative; never force map use. Support touch, keyboard and screen readers.
- Do not use colour alone to indicate selection. A food may have multiple verified regional associations; never force inaccurate exclusive district origin.
- Flow: Explore India → State → State Overview → District → District Food Collection → Product Detail → Add to Cart.

4.3 State and district templates

- State template: regional food introduction, featured traditional foods, district explorer, categories, festival foods, verified products, producer stories and related articles.
- District template: concise introduction, verified local food heritage, famous foods, dedicated real-food gallery, available products, local makers, preparation stories and related districts.
- Every published page must contain unique, useful, fact-checked content. Do not auto-generate thin pages or publish empty pages.
- Begin with Bihar. Prepare taxonomy for all 36 regions; publish each state/district only when content, product evidence and fulfilment are ready.

5. Shop, product catalogue and product detail

5.1 Shop All and categories

- Search, category, state, district, price, availability and verified dietary filters; sort by relevance, popularity, newest and price.
- Categories may include traditional sweets, regional snacks, savoury foods/namkeen, pickles and chutneys, flours and traditional mixes, ready-to-eat foods, festival specials, makhana and other suitable regional products.
- Clear loading, empty, error and out-of-stock states. Never show unavailable products as purchasable.
- Product cards show actual product image, name, verified origin, producer where approved, pack size, price, stock/availability and verified rating only where real reviews exist.

5.2 Product detail page

- Image gallery: primary product, packaging front/back, ingredient/label close-up, texture/serving image and optional genuine preparation video.
- Product title, verified origin state/district, producer, price, pack size/variant, stock, quantity, Add to Cart/Buy Now and delivery pincode check with realistic estimate.
- Product story and traditional context, ingredients, allergens, nutrition where available, preparation/processing, storage, shelf life and serving suggestions.
- Manufacturer/packer/marketer/seller details, applicable licence and label information, batch/lot/date fields and declarations.
- Show actual packaging and label/back-panel images where required. Distinguish serving suggestions from items included in the pack.
- Show verified reviews only; hide ratings/counts until real reviews exist. Add relevant related products and stories.

5.3 Product data fields

GROUP	FIELDS TO STORE / DISPLAY
Identity	Product ID, name, slug, category, description, food story, status.
Origin	Origin state, district, regional associations, evidence/source and reviewer approval.
Commercial	Retail price, wholesale pricing rules, tax settings, discounts, MOQ, case pack, stock and availability.
Pack & logistics	Net quantity, variants, SKU, dimensions/weight, packaging format, shipping class.
Food information	Ingredients, allergen declarations, nutrition facts, serving size, preparation, storage, shelf life.
Compliance	Manufacturer/packer/marketer/seller, applicable licence details, label declarations, batch/lot and dates.
Media	Actual product images, packaging/label images, producer/process media, video, alt text, rights/consent record.
Trust	Producer approval status, quality records, lab reports where relevant, customer reviews and complaint links.

6. Rasvani Better Choices — ingredients and dietary transparency

Create a dedicated discovery area. Recommended customer-facing name: “Rasvani Better Choices”. It should help customers understand product composition and compare options without making unsupported health or medical promises.

6.1 Collections

- **No Added Sugar:** only products whose formulation and evidence support the claim that no sugar has been added. Clearly distinguish this from total/ naturally occurring sugars.
- **Sugar-Free:** show only products that meet the applicable regulatory definition and verified product criteria. Do not apply this label merely because a producer says so.
- **Wholesome Traditional Foods:** curated products such as suitable roasted snacks, makhana, millet foods, traditional mixes and other products only where ingredient/nutrition data supports the description.
- **Ingredient-Aware Choices:** filters for declared ingredients, allergens and other verified product attributes. Do not infer suitability from a product name.

6.2 Product information customers should see

- Full ingredient list in the legally appropriate order and language, using the verified label/source.
- Added sugar information and total sugars where available; do not confuse “no added sugar” with “sugar-free”.
- Oil, ghee, salt, sweeteners, preservatives and additives only as accurately declared; avoid blanket “no preservatives” claims without evidence.
- Allergen declarations and cross-contact warnings where supplied/required.
- Nutrition information per 100 g/ml and per serving where available, with serving size clearly stated.
- Preparation/processing method, storage conditions, shelf life and date/batch information.
- Source of information: product label, manufacturer declaration, laboratory report or qualified review, with last verification date where appropriate.

6.3 Claim governance — mandatory

- Never say “everyone can eat this”, “safe for diabetics”, “cures”, “prevents disease” or similar medical/safety claims.
- Do not label a product “healthy”, “sugar-free”, “low sugar”, “high protein”, “natural”, “preservative-free” or “organic” unless the claim is supported and permitted under applicable rules.
- Keep claim evidence and approval records in the admin system. A qualified compliance reviewer must approve regulated claims before publication.
- Allow dietary filters only when product attributes have been verified. Make clear that customers with allergies or medical dietary needs must check the label and consult their qualified professional where appropriate.

6.4 Admin controls

- Claim status: Not assessed / Evidence requested / Under review / Approved / Rejected / Expired.
- Store evidence file, evidence type, reviewer, approval date, expiry/review date and exact wording permitted on the website.
- Automatically remove or flag expired claims and prevent unapproved badges from appearing on product cards.

7. Rasvani Verified Producer Programme

Use this name for the end-to-end producer trust and onboarding process. The public-facing “Become a Producer Partner” page invites applications; the internal verification programme determines whether a producer and product may be listed.

7.1 Producer application

- Producer/business name, contact name, email, phone, state, district and full business/production address.
- Product name, category, ingredients, claimed region of origin, traditional background and supporting evidence.
- Manufacturing capacity, production method, packaging format, shelf life, storage requirements and supply capability.
- Applicable food licences/registrations and supporting documents, product/packaging photographs and consent to review/contact.
- Application acknowledgement and reference ID. Clearly state that submission does not guarantee approval or listing.

7.2 Physical site inspection

- Rasvani staff or an authorised, trained inspector may visit the declared production location. The founder does not need to personally visit every site.
- Verify the actual business identity and address, production environment, cleanliness, hygiene practices, pest control, water handling, raw material storage, equipment/utensil cleanliness and staff hygiene.
- Review ingredient sourcing, preparation/processing workflow, contamination controls, packaging area, finished-goods storage, traceability and capacity.
- Check whether the product and packaging observed match the submitted details and label information.
- Record visit date, inspector, location, checklist responses, evidence photographs (with consent), findings, corrective actions and follow-up date.
- Do not treat a visit alone as proof of laboratory safety or legal compliance. Use qualified technical review and testing where applicable.

7.3 Samples and laboratory testing

- Define a documented sample collection procedure, sample identity, batch/lot, collection date, seal/chain of custody and receiving record.
- Decide tests based on product type, risk, applicable standards and qualified food-safety advice. Use appropriately accredited/recognised laboratories where required.
- Store reports against the exact product and batch/sample; record test scope, result, lab, date and reviewer.
- Do not claim a product is “lab tested” unless a relevant report exists and the claim accurately reflects what was tested.

7.4 Documents and compliance review

- Verify applicable FSSAI registration/licence and business identity, label declarations, ingredients, allergens, nutrition, net quantity, manufacturer/packer/marketer/seller details and batch/date/shelf-life fields.
- Review applicable Legal Metrology, GST, e-commerce, consumer-protection and other obligations based on Rasvani's actual role and the product arrangement.
- Keep legal/compliance decisions with qualified advisers. Requirements vary depending on whether Rasvani acts as seller, marketer, relabeller, distributor, marketplace or manufacturer.

7.5 Decision and ongoing monitoring

STATUS	MEANING / NEXT ACTION
Application Submitted	Application received; not approved.
Documents Under Review	Documents and claims being checked.
Inspection Pending	Site visit needs scheduling.

STATUS	MEANING / NEXT ACTION
Inspection Completed	Findings recorded; corrective actions may be required.
Sample / Lab Review	Testing or technical review in progress.
Approved	Producer/product approved for the defined scope and validity period.
Rejected	Application/product not approved; reason recorded internally and communicated appropriately.
Suspended	Listing paused pending investigation, expiry, complaint or corrective action.

Approval must be scoped: approval of one product, facility, process or batch does not automatically approve every product or future batch from the same producer.

8. Quality monitoring, traceability and customer trust

8.1 Ongoing quality controls

- Schedule periodic site visits based on risk, product type, complaints, changes and operational capacity.
- Use random or scheduled product sampling where appropriate. Define frequency with qualified food-safety guidance.
- Monitor product label/recipe changes, new ingredients, packaging changes, supplier changes, shelf life and manufacturing location changes.
- Review customer complaints, returns, damaged/expired product reports, adverse quality trends and corrective actions.
- Reassess documents, licence validity, testing evidence and approval expiry. Suspend a listing when critical evidence expires or serious concerns arise.
- Maintain an auditable record of who inspected, reviewed, approved, changed or suspended a producer/product.

8.2 Batch traceability and recall readiness

- Record producer, product, SKU/variant, batch/lot, manufacture/packing date, best-before/expiry, quantity received and inventory location where applicable.
- Link orders to product/lot information where operationally feasible.
- Provide an internal process to identify affected stock and orders, pause sales, contact customers and follow applicable recall/notification obligations.
- Keep incident, investigation, corrective action and closure records.

8.3 Customer-facing trust

- Show a truthful Rasvani quality-process explanation, producer details where approved, origin, product information and applicable licence details.
- Do not display a generic “Rasvani Certified” badge unless a defined, documented programme and criteria support it. Prefer specific labels such as “Producer reviewed” or “Documents verified” only when true.
- Provide a food/product complaint form for incorrect, damaged, expired, missing or quality-concern products.
- Support verified-purchase reviews and moderation. Do not fabricate reviews or suppress genuine negative feedback improperly.

9. Food heritage, Our Story, makers and videos

Keep these as distinct experiences so customers understand the difference.

SECTION	PURPOSE / CONTENT
Our Story	Why Rasvani exists, mission, vision, sourcing philosophy, quality approach and genuine founder/team story. Do not invent personal history.
Food Heritage Stories	Regional food origins, traditions, preparation, ingredients, festivals, forgotten foods and documented cultural context.
Meet the Makers	Real producer profiles, location, craft/process, product range and interview with consent.
Rasvani Food Vlogs	Actual site visits, food preparation, local markets, producer interviews and behind-the-scenes videos. Caption and obtain rights.
Recipes	Verified recipes with ingredients, method, servings, source/author and relevant regional context.
Food Memory Stories	Customer-submitted memories with moderation, consent and clear distinction from editorial facts.

Each article should include title, region, author/source, publication date, hero image, readable article, related products/stories, image/video rights and editorial review. Video should not autoplay with sound; provide captions and accessible controls.

10. B2B retailers, wholesale and distributors

- Explain product range, sourcing approach, quality process, supply capability and partnership steps without unsupported nationwide fulfilment claims.
- Business registration and verification workflow with business type, legal/business name, contact, address, GST details where applicable and supporting documents.
- Separate retail and wholesale price lists with role-based access.
- Minimum order quantity (MOQ), case pack, volume tiers, product availability and lead times where configured.
- Bulk enquiry and quote request, quote status, follow-up and internal assignment.
- Business account, order history, invoices and downloadable documents where supported.
- Distributor/retailer lead management and admin controls for approval, pricing, account status and terms.
- If automated wholesale checkout is not ready at launch, start with enquiry and quotation workflows while preserving the data model for later expansion.

Do not expose wholesale prices, producer documents or internal notes to public customers. Verify business accounts before granting trade pricing.

11. B2C commerce, checkout and fulfilment

11.1 Customer account

- Secure registration/login; OTP-based authentication if supported by the chosen provider.
- Profile, saved addresses, order history, order tracking, wishlist, support requests and privacy controls.
- Clear FAQs for orders, delivery, payments, product storage, returns and refunds.

11.2 Cart and checkout

- Cart quantity changes, remove/save actions, stock validation and clear totals.
- Address entry, pincode serviceability, shipping charges, taxes and realistic delivery estimate.
- Payment gateway integration with success, failure, pending, retry and reconciliation handling.
- Order confirmation, transactional email/SMS/WhatsApp where used and order status updates.
- Returns, refunds, cancellations and customer support flows consistent with approved policies.

11.3 Inventory and shipping

- SKU/variant-level stock, low-stock alerts, stock adjustments and history.
- Shipping provider integration for serviceability, rates, labels/AWB, tracking and webhooks where supported.
- Handle shipment failures, cancelled orders, undelivered shipments and refund exceptions.
- Do not promise delivery dates or service coverage until confirmed by actual shipping integration.

12. Admin dashboard and operational control

Build a usable admin dashboard so the Rasvani team can manage routine work without developer help.

MODULE	REQUIRED CONTROLS
Overview	Orders, sales, products, stock alerts, B2B leads, producer applications and quality actions; accurate live data.
Catalogue	Create/edit products, variants, images, categories, ingredients, origin, nutrition, claims, translations and status.
Regional taxonomy	Manage states, districts, food associations, evidence/source and regional page content.
Inventory	Stock by SKU/variant, low-stock alerts, adjustments and stock history.
Orders	Search, filter, process, cancel/refund where permitted, fulfilment updates and export.
Customers	Profiles, addresses and support history with role-based access and privacy safeguards.
Producers	Applications, documents, site visits, inspection checklists, samples, lab reports, verification status, products and approval workflow.
Quality & compliance	Claim evidence, document expiry, audit calendar, complaints, corrective actions, suspensions and traceability.
B2B leads	Business accounts, enquiries, assignment, notes, status, quotes, pricing and follow-up.
Content/CMS	Homepage sections, state/district pages, stories, recipes, videos, FAQs, banners and SEO metadata.
Promotions	Coupons, collections, offers and validity/eligibility rules.
Reports	Sales, products, orders, inventory, regional performance, producer quality and lead reports.

Provide bulk product import/export using CSV or Excel with field validation, duplicate detection, error reporting and preview before publishing. Use role-based permissions and audit important administrative actions.

13. Multilingual experience

Initial language set: English, Hindi, Bengali, Tamil, Telugu, Marathi, Gujarati, Punjabi, Kannada, Malayalam, Odia and Assamese.

- Visible language selector on desktop and mobile. Preserve language selection through browsing and checkout.
- Translate navigation, buttons, homepage, categories, state/district pages, product descriptions, forms, labels, validation messages, FAQs, policies, support, cart, checkout and transactional templates where used.
- Use professionally reviewed translations for food names, ingredients, allergens, safety, legal and checkout content. Machine translation may assist drafting but must not be sole quality control.
- Use clear fallback when translation is unavailable; never show empty pages or confusing mixed-language UI.
- Preserve brand names, protected product names, maker names and place names. Add local-language explanations without changing identity.
- Support Unicode, regional scripts, correct punctuation, diacritics, line breaks and script-specific font fallbacks.
- Store language variants separately from stable product/page IDs and regional taxonomy. Keep verified source content available to reviewers.
- Search should support native scripts and, where practical, transliteration and common spelling variants.
- Architecture must allow more Indian languages without rebuilding the site. Test all released languages on desktop and mobile.

14. Technical architecture and implementation rules

LAYER	RECOMMENDED DIRECTION
Frontend	Next.js + React + TypeScript.
UI system	Tailwind CSS or equivalent reusable design system.
Database/backend	Supabase (approved), using PostgreSQL and suitable Supabase services.
Data access	Prisma may be used where appropriate; avoid duplicating or fighting Supabase capabilities.
Animation	CSS transitions for simple effects; Framer Motion or GSAP for selected interactions.
Payments	Razorpay or another supported Indian gateway, subject to account approval and integration.
Shipping	Shiprocket or another suitable provider, subject to coverage, pricing and integration.
Hosting	Vercel or suitable managed hosting with monitoring and deployment pipeline.
Analytics	GA4, Search Console and consent-aware event tracking.
CMS/content	Supabase-backed content management or suitable headless CMS; avoid unnecessary complexity.

Implementation rules

- Document schema for products, variants, states, districts, food categories, producers, translations, inventory, orders, B2B leads, quality inspections, claims and content.
- Use secure environment variables. Never commit secrets, API keys or credentials to source control.
- Use database migrations, backups, access policies and role-based permissions.
- Do not build a complex multi-vendor marketplace unless the actual operating model requires it. Producer application and internal admin approval can be the initial operating model.
- Document integrations, recurring costs, data ownership, limitations and migration path before implementation.
- Do not assume an external service is configured. Confirm current APIs, fees, coverage, supported payment methods and compatibility directly with providers.

15. Motion, interaction and accessibility

COMPONENT	EXPECTED BEHAVIOUR
Hero	Subtle image movement and accessible text reveal; never harm readability.
Navigation	Keyboard-accessible dropdowns, visible focus and responsive behaviour.
India map	Hover/focus highlight, click/tap selection, state label/preview and accessible list alternative.
Product cards	Subtle image zoom, clear quick-add and cart feedback.
Product details	Smooth image gallery and clear tab/accordion behaviour for ingredients and origin.
Food stories	Restrained editorial reveals and optional captioned video.
Forms	Labels, validation, helpful errors, success confirmation and spam protection.
Loading	Skeleton/loading indicators; no blank or frozen-looking sections.
Motion	Respect reduced-motion preferences; avoid excessive parallax and scroll effects.

Use restrained transitions (typically around 200–600 ms where appropriate). No autoplay sound. Avoid heavy effects that slow mobile devices. Use semantic headings/landmarks, labelled controls, keyboard navigation, visible focus, meaningful alt text, sufficient contrast, screen-reader-friendly status messages, responsive text and correct language attributes.

16. SEO, performance, security and legal/food trust

16.1 SEO and discoverability

- Unique page titles, meta descriptions and canonical URLs; descriptive stable URLs for products, states, districts and stories.
- Product, organisation, breadcrumb and article structured data where valid; XML sitemap, robots rules and hreflang for language variants.
- Internal links between regional pages, food stories, categories and products.
- Useful original copy; no mass-generated thin district pages, keyword stuffing or invented claims.
- Search for product names, regional spellings, transliterations and language variants.

16.2 Performance targets

- Aim for good Core Web Vitals in field data: LCP ≤ 2.5s, INP ≤ 200ms, CLS ≤ 0.1.
- Responsive image sizes, AVIF/WebP where supported, lazy-load below the fold and prevent layout shifts.
- Avoid unnecessary scripts and heavy animation; split code and load only what is needed.
- Monitor errors, uptime, failed payments and shipping integration failures. Test real devices, browsers and slow networks.
- Do not claim targets are achieved until measured on real devices and networks.

16.3 Security and privacy

- HTTPS throughout; secure authentication, session management and admin access.
- Role-based permissions, least privilege, backups, audit logs and protected customer/producer data.
- Hosted/tokenised payment flow; never store raw card details.
- Form validation, spam protection, rate limiting and secure file uploads.
- Privacy notice, consent management and appropriate data retention/deletion processes.

16.4 Legal and food compliance

- Accurate ingredients, allergens, nutrition, net quantity, manufacturer/packer/marketer/seller details, batch/date, shelf life, storage and applicable licence information.
- Review applicable FSSAI, Legal Metrology, GST, e-commerce, consumer-protection and data-protection obligations for Rasvani's actual role and operations.
- Qualified professionals must review compliance before launch. Requirements vary depending on whether Rasvani acts as seller, marketer, relabeller, distributor, marketplace or manufacturer.
- Never publish unverified food-safety claims, dietary claims, certification logos, origin claims or producer approvals.
- Do not invent FSSAI licence numbers, GST status, legal statements or certifications.

17. Analytics and reporting

- Track product views, searches, filter use, add-to-cart, checkout starts, purchases and payment failures.
- Track state/district discovery journeys and most-used search terms.
- Measure language-selector use and locale-specific conversion issues.
- Track B2B enquiry submissions, lead status, producer applications, inspection outcomes and approval turnaround.
- Build reports for sales, average order value, product performance, inventory, regional demand, lead conversion, complaints and producer quality.
- Use consent-aware analytics and avoid collecting unnecessary personal information.

18. Phase-by-phase implementation roadmap

Indicative timing is a planning aid, not a promise. Actual delivery depends on content readiness, product verification, translations, integrations, approvals and team capacity. Each phase has a gate: do not proceed until its acceptance checks pass.

PHASE 0 — Project discovery and repository audit

Indicative timing: Before build

Work to complete

- Review all approved requirements, existing repository, assets, brand files and current implementation.
- Confirm business operating model: who sells, owns stock, packs, ships, handles returns and is legally responsible for each product.
- List open decisions, dependencies, risks, budget-sensitive integrations and launch assumptions.
- Create sitemap, user journeys, data inventory, acceptance criteria and project backlog.
- Confirm brand spelling Rasvani, tagline, approved logo, contact details and Supabase direction.

Phase gate / acceptance: Signed-off scope, architecture decision record, sitemap, backlog, risks and phase plan.

PHASE 1 — Brand system, UX and clickable prototype

Indicative timing: Weeks 1–2

Work to complete

- Create responsive design system: palette, typography, spacing, grid, buttons, cards, forms, badges and icon style.
- Design homepage, Shop All, product page, Explore India, state page, district page, Better Choices, producer application and admin wireframes.
- Use the uploaded reference for mood: cream editorial canvas, maroon/terracotta/forest/gold, premium serif headings and real food photography.
- Prepare desktop and mobile prototypes and test navigation with representative users.
- Define motion principles and accessibility rules before implementation.

Phase gate / acceptance: Approved design system, desktop/mobile wireframes, clickable prototype and asset plan.

PHASE 2 — Technical foundation and reusable shell

Indicative timing: Weeks 2–3

Work to complete

- Set up Next.js, React, TypeScript, styling system, linting, testing, environment configuration and deployment preview.
- Connect Supabase securely; define migrations, authentication approach, role model and storage strategy.
- Build shared header, navigation, footer, buttons, cards, forms, modal, toast, skeleton, empty and error states.
- Set up logging, error boundaries, analytics consent foundation and responsive layout.
- Create staging environment and document setup steps.

Phase gate / acceptance: App runs reliably; reusable components, secure configuration, database connection and preview deployment pass checks.

PHASE 3 — Regional data foundation and Explore India

Indicative timing: Weeks 3–5

Work to complete

- Create state/UT and district taxonomy for all 36 regions, with source/evidence and publication status.
- Implement accurate map asset using verified boundaries; clickable regions, labels, hover/focus and selection states.
- Create searchable state/district list alternative for mobile and accessibility.
- Build reusable state and district templates with unique content requirements and image gallery support.
- Load Bihar first with verified state/district content; leave unready regions unpublished.

Phase gate / acceptance: Map and list navigation work; Bihar pages are useful and fact-checked; no empty or false-origin pages.

PHASE 4 — Catalogue, product detail and Better Choices

Indicative timing: Weeks 4–6

Work to complete

- Build product, variant, SKU, origin, producer, ingredient, allergen, nutrition, packaging, media and compliance data models.
- Implement Shop All, category pages, search, filters, sorting and product cards.
- Build product detail gallery, price, pack, stock, pincode, add-to-cart, product story and transparency sections.
- Add Better Choices collections and claim approval workflow for no-added-sugar, sugar-free and other eligible attributes.
- Require evidence and reviewer approval before dietary/health-related badges or filters appear.

Phase gate / acceptance: Products can be managed and displayed accurately; unverified claims cannot publish.

PHASE 5 — B2C commerce and fulfilment

Indicative timing: Weeks 5–7

Work to complete

- Implement customer accounts, addresses, wishlist, cart and checkout.
- Integrate selected payment gateway in test mode; verify webhooks and payment status reconciliation.
- Integrate shipping service after confirming serviceability, rates and API requirements.
- Implement order confirmation, status tracking, cancellation/refund and support paths.
- Test stock, tax, shipping, payment failure, retry, duplicate webhook and out-of-stock cases.

Phase gate / acceptance: End-to-end test purchase and order lifecycle pass; no live payments until KYC and approvals complete.

PHASE 6 — Producer applications and Verified Producer Programme

Indicative timing: Weeks 6–8

Work to complete

- Build Become a Producer Partner page, application form, file upload and acknowledgement/reference ID.
- Build admin review queue, producer profile, document checklist and application status tracking.
- Implement site inspection scheduling, checklist, inspector record, evidence upload and corrective-action workflow.
- Implement sample collection, chain-of-custody record and laboratory report attachment/review where applicable.
- Add producer/product approval scope, validity, suspension and audit trail.
- Build public producer profile only for approved and consented information.

Phase gate / acceptance: A producer can apply; staff can review documents, record inspection/testing and make a traceable decision.

PHASE 7 — B2B retailers, wholesale and distributor workflow

Indicative timing: Weeks 7–9

Work to complete

- Build For Retailers, Wholesale and Distributor Enquiry pages and business application forms.
- Add business verification, role-based trade access, price lists, MOQ, case packs and volume tiers where configured.
- Build enquiry/quotation workflow, assignment, follow-up and business status.
- Protect trade pricing and documents from public access.
- Start with manual quotations if automated wholesale checkout is not ready.

Phase gate / acceptance: B2B leads are tracked and reviewed; approved businesses see only their permitted trade data.

PHASE 8 — Stories, producer media and CMS

Indicative timing: Weeks 8–10

Work to complete

- Build Our Story, Food Heritage Stories, Meet the Makers, recipes, Food Vlogs and Food Memory Stories.
- Create CMS controls for content, captions, source attribution, rights/consent, region tags and related products.
- Use actual licensed photography and real videos for named people, places, products and production processes.
- Add moderation and editorial review before user-submitted stories or producer content are published.

Phase gate / acceptance: Editorial pages and video work on desktop/mobile; rights, captions and approvals are recorded.

PHASE 9 — Multilingual content and SEO

Indicative timing: Weeks 9–11

Work to complete

- Implement language selector, locale persistence, routing, translated content fields and fallback behaviour.
- Release English, Hindi, Bengali, Tamil, Telugu, Marathi, Gujarati, Punjabi, Kannada, Malayalam, Odia and Assamese in reviewed batches.
- Review translations for food names, ingredients, allergens, safety, legal and checkout content.
- Implement metadata, canonical/hreflang, structured data where valid, sitemap and internal links.

Phase gate / acceptance: Language switching works through checkout; translated critical content is reviewed; SEO checks pass.

PHASE 10 — Admin, reporting and operations readiness

Indicative timing: Weeks 10–11

Work to complete

- Complete admin dashboard for catalogue, regions, orders, customers, producers, inspections, lab reports, claims, B2B, CMS and promotions.
- Add CSV/Excel bulk import/export with validation, duplicate detection, error reporting and preview.
- Add sales, inventory, regional, lead, quality and complaint reports.

- Train staff on producer review, inspection, claims, product publishing, complaints and recall readiness.

Phase gate / acceptance: Staff can operate routine tasks without developer help; permissions and audit logs are verified.

PHASE 11 — QA, security, accessibility and launch

Indicative timing: Weeks 11–12+

Work to complete

- Test all critical journeys on desktop, Android and iOS, major browsers and slow networks.
- Test map keyboard/screen-reader access, all released languages, forms, search, filters, cart, checkout, payments and shipping.
- Run security review, role checks, backup/restore test, dependency review and privacy/legal/food compliance sign-off.
- Verify actual product images, labels, ingredients, producer approvals, origin evidence, stock and fulfilment.
- Soft launch Bihar catalogue; monitor defects, support, conversion, serviceability, stock and complaints.
- Prepare rollback plan, owner handover, support route and maintenance schedule.

Phase gate / acceptance: Production smoke tests pass; no critical defects; launch sign-offs, documentation and training complete.

PHASE 12 — Measured expansion

Indicative timing: After launch

Work to complete

- Expand state and district content only when verified research, images, producers, products and fulfilment are ready.
- Add more languages, regional collections, gift boxes, advanced wholesale checkout, loyalty and deeper integrations based on demand.
- Review analytics, customer feedback, producer quality and operating costs before each expansion.

Phase gate / acceptance: Expansion is based on real demand and operational readiness—not empty page-count targets.

19. Final testing and acceptance checklist

AREA	MUST PASS BEFORE RELEASE
Brand/design	Correct Rasvani name/tagline; approved visual identity; responsive layout; no overlap, broken layouts or missing assets.
Photography/content	Real, licensed and accurate product/producer photos; no unintended crop; verified origin, maker and product claims.
Regional discovery	Map/list works with mouse, touch, keyboard and screen reader; state/district content accurate; no empty thin pages.
Better Choices	Sugar-free/no-added-sugar and other claims have evidence, reviewer approval and accurate display; unverified badges blocked.
Producer quality	Applications, documents, inspections, sample records, lab reports, decisions, expiry and audit history are traceable.
Commerce	Variants, stock, cart, checkout, tax/shipping totals, payment success/failure/pending/retry, confirmation and refunds/cancellations as applicable.
Shipping	Pincode serviceability, rates, shipment booking, tracking, webhooks and failure paths.
Multilingual	Selector persists; released languages reviewed; no broken scripts, clipped glyphs or mixed-language errors.
B2B/producer	Forms validate; acknowledgements/reference IDs created; staff can review, assign and update status; wholesale pricing protected.
Admin/security	Server-side role permissions, audit logs, protected customer/producer data, backups and secure file upload.
SEO/accessibility	Metadata, canonical/hreflang, sitemap, semantic labels, contrast, keyboard, screen reader and reduced motion.
Performance	Measure LCP, INP, CLS on real devices/mobile networks; optimise images/scripts/fonts.
Launch readiness	Live KYC, approved legal content, FSSAI details, domain, backups, monitoring, support contacts and rollback plan.

20. Required developer handover

- Production website and working admin dashboard.
- All source code, design files and custom assets created for the project, with ownership/licensing clearly documented.
- Repository access, deployment instructions and environment configuration documentation; never place secret values in handover documents.
- Database schema/data model and regional taxonomy documentation.
- List of third-party services, subscriptions, account owners, recurring costs and renewal dates.
- Payment, shipping, analytics, CMS and email integration documentation.
- Content import templates, translation workflow, image rights register and producer verification SOP.
- Admin/user guide and staff training.
- Backup, restore, security update and maintenance procedures.
- QA report, test evidence, known limitations, open issues, warranty/bug-fix period, support SLA and maintenance scope.

21. Final instruction to the design and development team

Build Rasvani as a premium, modern, multilingual Indian regional-food discovery and commerce platform. Combine the warmth of Indian culinary heritage with contemporary, conversion-focused e-commerce design. Make regional discovery the signature experience, verified state- and district-level food identity the differentiator, transparent product information and producer quality controls the trust foundation, and seamless B2C and B2B commerce the business foundation.

- Preserve the brand name Rasvani and tagline “India, Served by Region.”
- Use Supabase as the approved database/backend foundation; begin regional launch with Bihar and prepare the taxonomy for all 36 States and Union Territories.
- Use the supplied design reference as visual inspiration: warm cream surfaces, maroon/terracotta/forest-green/gold palette, elegant serif headings, clear product cards and premium real-food imagery.
- Use actual photographs for products, packaging, producers, production locations and regional proof. AI imagery is decorative/illustrative only and must never be misrepresented as real evidence.
- Include Rasvani Better Choices with transparent ingredients, allergens and nutrition; regulate sugar-free, no-added-sugar and other claims through evidence and approval.
- Implement Rasvani Verified Producer Programme with document review, site inspection, sample/lab review where applicable, approval scope, ongoing audits, traceability and complaint handling.
- Keep all existing sitemap, commerce, B2B, multilingual, accessibility, SEO, security, analytics, admin and handover requirements.
- Do not invent products, district associations, reviews, producer claims, certifications, business coverage, fulfilment capabilities or administrative contact details.
- Do not create duplicate content or non-functional controls. Build in small, testable phases and obtain approval at every phase gate.

SUCCESS DEFINITION

Customers can discover a regional food, understand where it comes from, see what it contains, identify the producer and relevant verification information, purchase it confidently, receive clear order updates and use a language they understand. Producers and business buyers have a clear, fair and trustworthy way to work with Rasvani.

RASVANI

India, Served by Region.
